Did you know steel is the world's most recycled material?

### Q How Long has Roscoe Bridge Been Making Bridges?

First, let's answer the question of how long Roscoe Steel & Culvert has been building Design-Build bridges – over 20 years! However, Roscoe Bridge, as a business unit and focused marketing entity has been in-place for approximately 4 years. We identified the market niche as a significant market to focus and channel our design and fabrication expertise about 5 years ago and significantly reconfigured our Missoula Plant operation to support bridge growth. After Missoula's re-organization and focus on bridge, we brought the Casper Plant into the matrix of production resources to meet regional demand. As you are reading this, our largest plant in Billings, Montana is being managed towards meeting the demand for larger, heavier modular steel bridges, up to 200-foot free span.

### Q What is the Roscoe Bridge Reputation?

Roscoe Bridge has developed the reputation of delivering bridges on-time, every time! By purchasing our steel beams directly from the steel mills, and stocking all the critical beams and materials to build our bridges, we are able to accurately and honestly commit to delivery dates. Imagine never having to blame suppliers, engineers or service providers for late deliveries. Roscoe Bridge has the material, the expertise, and the commitment to meet every requirement. If we say we're going to do it, we do! Please click on the [Bridge Installations and Customer References](#) link to read what our customers say about us.

“Roscoe Steel & Culvert pre-engineered and prefabricated an 80-foot pedestrian bridge ..... Careful attention was given to the drawings as well as the schedule and delivery. This project was on-time. They will be called upon in the future for all similar projects.”
